

Outpatient Services

Outpatient Services at Hope Network Neuro Rehabilitation support people as they work toward getting back to everyday life. Each person has a care plan designed around their goals, focused on improving strength, thinking, and other skills needed for independence. Therapies can range and may include support for movement, communication, emotional well-being, and returning to work or daily activities.

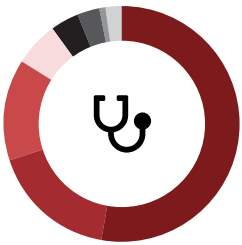

Average Outpatient Visits

 - 85+: <1%

“Great experience! A variety of rehab services all in one place is very convenient.”

— Patient

Post-Concussion Program

Our specialty Post-Concussion Program is designed to help people who continue to experience symptoms that haven’t improved with routine or traditional care. We support patients with more complex recoveries through personalized treatment, helping them return to their daily activities as quickly and safely as possible—while using only the amount of care needed to achieve the best possible outcome.
